

FUMIS - CREATING THE FUTURE OF BIOMASS COMBUSTION CONTROL TECHNOLOGY

CREATING THE FUTURE

OF BIOMASS COMBUSTION CONTROL TECHNOLOGY

YOURCHALLENGE

YOUR AMBITION:

Differentiate your stoves, burners and boilers with innovative biomass combustion control technology. Increase the value of your product. Increase the sales and lead the market. Reduce production cost with a reliable partner.

YOUR SOLUTION:

FUMIS product portfolio, innovative biomass combustion control technology with visually attractive, easy to use intuitive touch screen. Our team of experts will evaluate your needs and help you execute your vision. We will put together an evaluation and project plan that responds to your needs and helps your company meet your business goals.

OUR PARTNERSHIP:

Defining the scope of the project is the first step towards a longterm, profitable partnership. You can fully rely on our production management excellence to guarantee timely delivery. We will support you every step of the way with 360° customer service (technical, pre-sales, post-sales).

Call or e-mail us to discuss your challenge:

Focus on your business
while we take care of
maximizing your product
value.

YOUR OPPORTUNITY

- DIFFERENTIATE** your product from the competition
- DECREASE** production costs and after-sales costs
- INCREASE** your product margin, product sales, and market share
- ENSURE** sustainable company growth
- STRENGTHEN** brand image and brand awareness among the target audience
- PROTECT** the environment with cleaner green technology

LEAD THE MARKET

with FUMIS, the next generation of innovative and cost efficient biomass combustion control technology!

Efficient biomass combustion

Green technology for your company's success

Increased sales and market share

FUMIS ADVANTAGES

MAXIMUM USER COMFORT

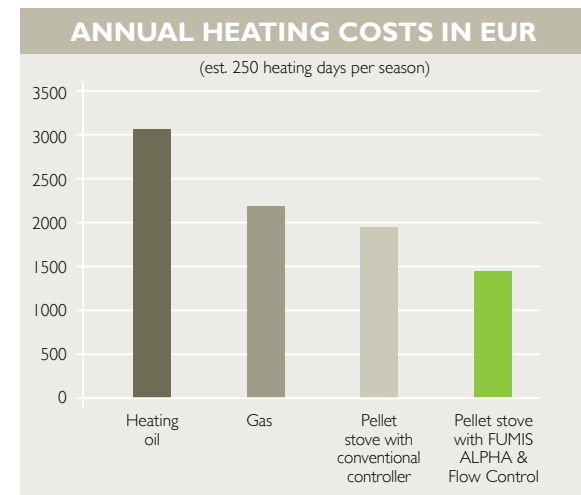

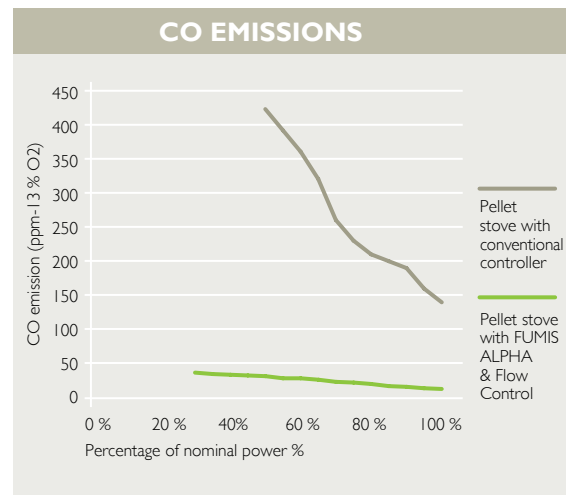

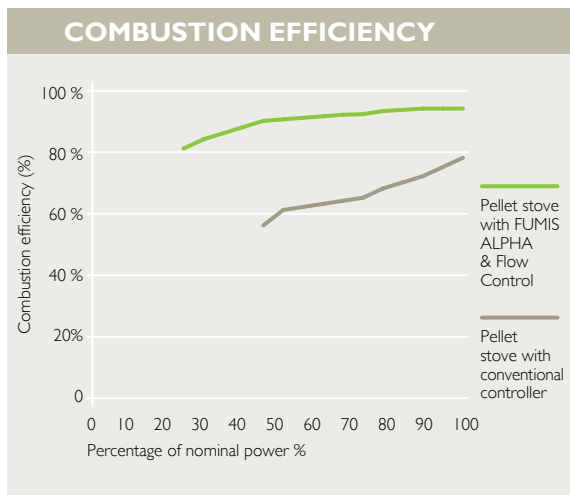

- 100 % operating autonomy
- Prediction of remaining operating hours and biomass level control
- Effective user communication via intuitive touch screen interface
- Visually attractive, ergonomic design

ECO FRIENDLY

- Lower fuel consumption
- Lower CO emissions
- Lower particle emissions

COST EFFICIENT

- Lower fuel consumption due to higher efficiency
- Lower heating cost due to optimum combustion in all operating conditions
